Can drawing a picture help me see the problem?

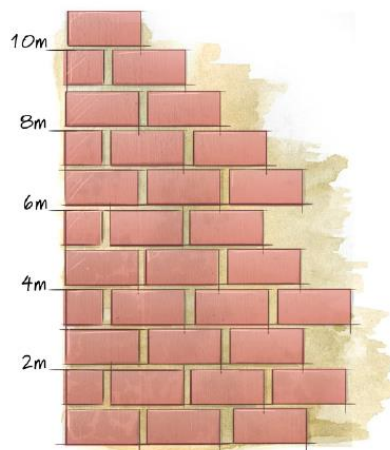

©Literature

Sometimes drawing a picture or a diagram helps you to 'see' the problem more clearly and easily.

The Problem: A frog needs to climb out of a well 10 metres high. He climbs two metres each day, but each night he slips back one metre. How many days will it take him to climb out of the well?

Step One: Draw a picture or a diagram that matches the information you have been given.

Step Two: Add any further information that will help you to solve the problem.
